PROFESSIONAL SUMMARY

I want a fast shipping and development working environment. Being surrounded by people who are keen to solving problems and take challenges head on, is where I thrive. I have delivered features by working independently on them, as well as collaborating with multiple teams. I have also lead teams, and delivered features without any major bugs or issues. I make sure that both, my team and I, take our time to plan and clarify requirements and get approvals, before even writing a line of code.

AREAS OF EXPERTISE

AI Agents: Claude code, Codex, Github Copilot	Java Spring Boot with Micro-services and REST APIs
Python	Apache Kafka
Databases - Oracle, MySQL, PostgreSQL, MongoDB, Redshift, Cassandra	Redis
Kubernetes and Docker	Monitoring - Grafana, Splunk, Prometheus
CI/CD pipelines - Jenkins, Harness, GitHub Actions	Linux
Data Structures and Algorithms	Clouds - AWS, Azure, GCP

EMPLOYMENT HISTORY

Dec 2023 — Present	Senior Software Engineer, Lloyds Technology Centre	Hyderabad
	Creating applications used by investment bank traders, mostly curves to observe and manage risk. Currently, they rely heavily on Excel spreadsheets. These new applications are built using Beacon framework (Python) for the front end, and Java Spring Boot micro services for the back end, which is made specifically for high volume high frequency trade data. While we are trying to re-create the existing apps and flows, we also make improvements.	
Oct 2021 — Nov 2023	Senior Software Engineer, Brane Enterprises	Hyderabad
	Created back end Java Spring Boot micro services for a no-code-low-code platform. This was more focused on async services, since there were components involving AI/ML techniques. This made us incorporate Kafka, RabbitMQ and WebSockets into the application.	
Mar 2019 — Oct 2021	Senior Software Engineer, KloudGin	Hyderabad
	Created a BI reporting service, using Amazon Quick Sight and Redshift database. We created an ETL in house, using Java, which reduced the time taken to store data into the data warehouse from 5 hours to 15 minutes, compared to the third party ETL tool Talend. We then created BI reports using Amazon Quick Sight, which helped generate customer reports and internal billing reports.	
Oct 2016 — Oct 2018	Software Engineer, Virtusa	Pune
	Redesign of the CITI Bank commercial card application CitiManager legacy code written in GWT into an MVC architecture, using Java 8.0 and Spring Boot. This involved heavily optimizing and separating the Oracle database queries, to improve speed and readability. The legacy application was heavily reliant on slow, highly abstract, stored procedures.	

PROJECTS

App to learn typing: https://github.com/ikpvk/omarchy_learn_typing
Linux alias pane: https://github.com/ikpvk/omarchy_alias_pane
